Emory University
Children’s Nutrition and Gut Microbiome Study

Is your child between 3 and 22 years old?

Your child may be eligible to participate in an Oncology Nursing Society-funded study at Emory University as a healthy participant. This study will compare the gut bacteria of healthy children to the gut bacteria of children with cancer. Participants will be asked to complete a short questionnaire & submit a stool sample.

Each child will receive an incentive in the form of gift card. The child’s parent will receive a gift card for their assistance with the study.
